

CO1 - ASSESSMENT TOOL-2 - CONCEPT MAPPING

1. Construct a concept map that identifies digital image formation, clearly linking sensing, sampling, and quantization stages with their impact on image quality, integrating relevant literature insights and presenting the relationships in a structured manner.

2. Develop a concept map that identifies factors affecting spatial resolution, clearly linking them to sampling rate, pixel density, application requirements, incorporating supporting evidence from literature and presenting the structure with clarity.

3. Develop a concept map that identifies different levels of Computer Vision, establishes relationships between low-level processing, mid-level analysis and high-level interpretation.

## LEVELS OF COMPUTER VISION
